Multi-Carrier MPLS-VPN

Next Generation MPLS Enhancements

Virtual Private Network (MPLS-VPN) Meshed Network is the ultimate product for organizations requiring secure T-1 speed higher and above data networks with private network security.
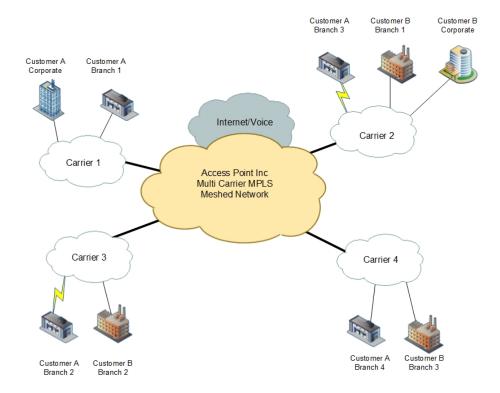

Our fully meshed network allows you to pick and choose carriers for each location offering maximum flexibility and savings compared to traditional MPLS or Wide Area Networking (WAN) solutions. Multi-Carrier MPLS-VPN is your flexible path to migrate from legacy data networks to a high performance, scalable and secure IP-based network.

Link all of your sites to a single network or create multiple secure networks.

This is the ideal product for customers who want to transition from traditional VPN or packet based solutions to the more efficient, secure and economical IP-VPN solutions. Improve your network efficiency with flexible addressing options and support for your private or public LAN. Quality of Service (QoS) enables you to prioritize your traffic over a single infrastructure allowing for the highest levels of performance for your voice, video and data traffic.

The Benefits

- ✓ Largest footprint in the industry
- ✓ Improve network efficiency
- ✓ Meshed Networks (NNI) allows for multiple carrier solutions
- ✓ Voice over MPLS (VoMPLS) available
- ✓ Secure and reliable network architecture
- ✓ Widest coverage area across multiple carrier networks
- ✓ Efficient and scalable
- ✓ Integrate multiple voice, data & video networks into a single IP-based network
- ✓ Add new locations and applications to your network
- ✓ Quality of Service (QoS) ensures that business critical applications are prioritized for highest levels of quality.
- ✓ Single bill and single point of contact
- ✓ Custom solutions to deliver the architecture that you need
- ✓ Reliable and secure
- ✓ Ability to combine networks from multiple carriers
