

Enable users to park a call against their call park group and set call park attributes.

Parking a call allows a user to place a call on hold within the group/location or entire enterprise and retrieved from any phone on the network. This can reduce hold time for the individual caller as well as time required by the user placing the call on hold to locate a particular user to send the call.

Specific Set Up Options:

- Alternate Recall User
- Customized Display Timer
- Park Destination Announcement
- Ring Pattern for Recalled Calls
- Recall Timer
- Alert Alternate Recall User Wait Time
